- React JS
- Redux
- Redux Toolkit
- Redux Thunk
- Vue
- Vuex
- Pinia
- Typescript
- Jquery
- Leaflet JS
- Puppeteer JS
- Axios
- AJAX
- Pixel Perfect
- Gulp
- Vite

ABOUT ME

For several years now, I've been freelancing, predominantly creating websites. Most frequently, these were jQuery-based landing pages.

I would describe my proficiency level as a confident Junior or Junior+.

Currently, I'm focused and actively enhancing my skills in two frameworks: React and Vue. I've authored several projects using these frameworks, including:
- **A currency converter with login capabilities, conversion history viewing, and a subscription feature to monitor exchange rate fluctuations using React, Redux, Redux Thunk, and Typescript.**
- **A website displaying weather for selected cities developed in Vue, Typescript, and Pinia.**
- **A widget with stopwatches using Vue and Vuex.**
- **A city theater events library on React, integrating backend data via Axios.**
